Art Unit: 1646

DETAILED OFFICE ACTION

Applicant's amendment filed on 19 April 2011 is acknowledged and entered. Following the amendment, claims 93, 99, 100, 104, 106, 107, 116 and 121-123 are canceled, and the new claim 124-126 are added.

Currently, claims 124-126 are pending and under consideration.

Withdrawal of Objections and Rejections:

All objections and rejections of claims 93, 99, 100, 104, 106, 107, 116 and 121-123 are moot as the applicant has canceled the claims.

Rejections Over Prior Art:

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 C.F.R. 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Claims 124 and 125 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakamura *et al.* (*Infect. Immun.* 61: 64-70, 1993), and Campbell, A. (Laboratory Techniques in Biochemistry And Molecular Biology, Volume 13, Chapter 1, pages 1-33, 1984), and further in view of Shulman *et al.* (*Nature*, 1978, 276:269-70).
